

EXP.NO: 2	Write JavaScript Program to validate the following fields of the HTML Registration page.
------------------	---

AIM:

To write JavaScript code to validate user input in a registration form. The validation will ensure that the data entered by the user meets specific criteria for each field. This will help in maintaining data integrity and prevent invalid submissions.

ALGORITHM:

1. Input:

- The user fills in the following fields: **First Name, Password, E-mail, Mobile Number, Last Name, and Address.**

2. Validation Steps:

1. Validate First Name:

- Check if the first name contains **only alphabets**.
- Ensure the length of the **First Name** is **at least 6 characters**.
- If any of these conditions fail, display an error message indicating the required input.

2. Validate Password:

- Check if the password is **at least 6 characters long**.
- If it is less than 6 characters, display an error message.

3. Validate E-mail:

- Use a **regular expression** to check if the email follows the standard pattern: name@domain.com.
- Ensure that the email contains **no invalid characters** and matches the required pattern.
- If it doesn't match, display an error message indicating an invalid email format.

4. Validate Mobile Number:

- Check if the mobile number contains **exactly 10 digits**.
- Ensure there are **no alphabets or special characters**.

- If the number is invalid, display an error message indicating the correct format.

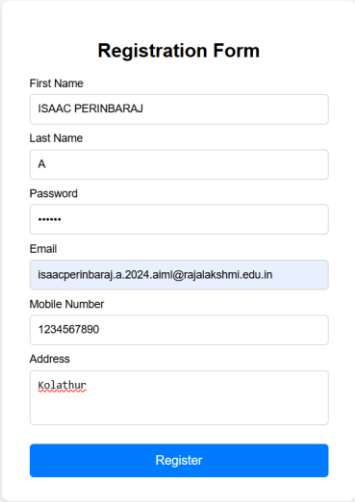

5. **Validate Last Name:**

- Ensure the **Last Name** field is **not empty**.
- If it is empty, display an error message.

6. **Validate Address:**

- Ensure the **Address** field is **not empty**.
- If it is empty, display an error message.

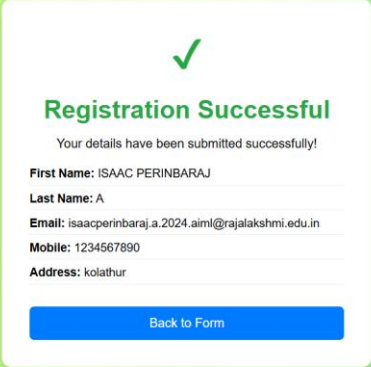

Output:

A registration form titled "Registration Form" with the following fields and values:

- First Name: ISAAC PERINBARAJ
- Last Name: A
- Password: *****
- Email: isaacperinbaraj.a.2024.aiml@rajalakshmi.edu.in
- Mobile Number: 1234567890
- Address: Kolathur

A blue "Register" button is at the bottom.

A confirmation screen with a green background. It features a green checkmark icon and the text "Registration Successful". Below this, it says "Your details have been submitted successfully!". The submitted details are listed:

- First Name: ISAAC PERINBARAJ
- Last Name: A
- Email: isaacperinbaraj.a.2024.aiml@rajalakshmi.edu.in
- Mobile: 1234567890
- Address: kolathur

A blue "Back to Form" button is at the bottom.

HTML File (register.html):

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title>Registration Form</title>
  <link rel="stylesheet" href="register.css">
</head>

<body>
<div class="form-box">
  <h2>Registration Form</h2>

  <form id="form">

    <label>First Name</label>
    <input type="text" id="fname">

    <label>Last Name</label>
    <input type="text" id="lname">

    <label>Password</label>
    <input type="password" id="password">

    <label>Email</label>
    <input type="text" id="email">

    <label>Mobile Number</label>
    <input type="text" id="mobile">

    <label>Address</label>
    <textarea id="address"></textarea>

    <button type="submit">Register</button>
  </form>
</div>
<script src="register.js"></script>
</body>
</html>
```

Javascript File (register.js)

```
document.getElementById("form").addEventListener("submit", function(e) {
    e.preventDefault();

    let fname = document.getElementById("fname").value.trim();
    let lname = document.getElementById("lname").value.trim();
    let password = document.getElementById("password").value.trim();
    let email = document.getElementById("email").value.trim();
    let mobile = document.getElementById("mobile").value.trim();
    let address = document.getElementById("address").value.trim();

    let namePattern = /^[A-Za-z]+$/;
    if (!namePattern.test(fname)) {
        alert("First Name must contain only alphabets");
        return;
    }
    if (fname.length < 6) {
        alert("First Name must be at least 6 characters");
        return;
    }

    if (password.length < 6) {
        alert("Password must be at least 6 characters");
        return;
    }

    let emailPattern = /^[^ ]+@^[^ ]+\.[a-z]{2,3}$/;
    if (!emailPattern.test(email)) {
        alert("Enter valid Email");
        return;
    }

    let mobilePattern = /^[0-9]{10}$/;
    if (!mobilePattern.test(mobile)) {
        alert("Mobile must be exactly 10 digits");
        return;
    }

    if (lname === "") {
        alert("Last Name cannot be empty");
        return;
    }

    if (address === "") {
        alert("Address cannot be empty");
        return;
    }
}
```

```
localStorage.setItem("fname", fname);
localStorage.setItem("lname", lname);
localStorage.setItem("email", email);
localStorage.setItem("mobile", mobile);
localStorage.setItem("address", address);

window.location.href = "success.html";
});
```

HTML File (Success.html):

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title>Registration Successful</title>
  <link rel="stylesheet" href="success.css">
</head>

<body>

<div class="card">
  <div class="icon">✓</div>
  <h1>Registration Successful</h1>
  <p>Your details have been submitted successfully!</p>

  <div class="details">
    <p><b>First Name:</b> <span id="fname"></span></p>
    <p><b>Last Name:</b> <span id="lname"></span></p>
    <p><b>Email:</b> <span id="email"></span></p>
    <p><b>Mobile:</b> <span id="mobile"></span></p>
    <p><b>Address:</b> <span id="address"></span></p>
  </div>

  <button onclick="goBack()">Back to Form</button>
</div>

<script src="success.js"></script>

</body>
</html>
```

Javascript File (success.js):

```
document.getElementById("fname").innerText = localStorage.getItem("fname");
document.getElementById("lname").innerText = localStorage.getItem("lname");
document.getElementById("email").innerText = localStorage.getItem("email");
document.getElementById("mobile").innerText = localStorage.getItem("mobile");
document.getElementById("address").innerText =
localStorage.getItem("address");

function goBack() {
localStorage.clear();
window.location.href = "register.html";
}
```

RESULT:

HTML page with Form is created and is validated using Javascript
